hey

i just want to map 2 stings into a data class, how to do that ?
basically those latitude and longitude conveted into
LocationDetails() class

i have a toolba menu

cuently looks like this

[<-CODE->]

I want the log out item at the bottom

This doesn't sound like good UX to me :hmmGe:

I am wanting to Design and make my own Custom keyboard Layout, How
do i go about this and how Challenging is it? - I am new to Andoid Dev :)
(Ping Me)

what have you tied so fa

best you look fo some open souce poject and take a look, but pobably a
huge challenge if you'e just stating out
ok, thanks

I found the way, thanks anyway

``` location.add(MechantLocation("blank", latitude, longitude)) ```

you can also use the `+=` opeato btw :zoop:

how is it ?

e.g.```ktval myList = mutableListOf<MyItem>()myList += MyItem(/\* ... \*/)```
